

Stop paying for expensive electricity

This amazing rooftop wind generator gives you free electricity.

This highly wind efficient rooftop turbine is designed to be placed on the roof ridge or it can be also easily mounted on flat roofs. Wind that collides with a pitched roof can travel up to 3 times faster than nearby wind due to compression. This 'roof effect' has been shown to form a layer of wind up to 1 metre high as it passes over the roof ridge. The Liberty NRGPLUS is very strongly anchored to the roof and has been field tested in gale force winds of up to 130kph. It can work for 24 hours a day and is a perfect wind energy solution for battery charging and storage.

- *Patent applied blade structure for indestructible performance in high winds.*
- *Turbine is magnetically levitated for long, maintenance free operation.*
- *Silent Operation.*
- *Vibration Free.*
- *Easily Installed.*
- *DC current for battery storage.*
